This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.
It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.
Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

## PREFACE.

In preparing this edition of the 'Clouds' of Aristophanes I have endeavoured to give such full explanatory notes as to make it a helpful school-book for the use of the higher forms; while I have tried not to neglect the wants of somewhat more advanced scholars. The liveliness of the subject, the insight given into the political and social life of Athens, and the singular simplicity of the syntax, combine to recommend the study of Aristophanes in every way. The excisions that have been made are few; but they will be found, I hope, sufficient.

I gratefully acknowledge the help that I have derived from Teuffel's two editions (Teubner, Leips. 1863, 1867); and from the excellent introduction to the edition of Theo. Kock, (Weidmann, Berlin, 1862).

## CONTENTS.

## INTRODUCTION.

Ir has been well said that the three great tragic poets of Athens are true representatives of three eras in her history. Aeschylus seems to breathe the spirit of Athens at the time of the Persian war, in which he himself had borne a part. Sophocles mirrors in absolute perfection the harmonious grace and artistic beauty of the age of Pericles. Euripides, though removed so little in point of time from his predecessors, seems to express a different tone of society. Some would go so far as to call him the poet of the decadence.
Aeschylus exhibits to us a mind deeply religious, and severely earnest-awed by the judicial power of the gods and reverently submissive to their binding laws. Sophocles, with a more genial spirit, can better appreciate the harmony of human freedom and divine ordinance. The triumph of moral order over self-will is with him rather a happy result than a crushing defeat.
Euripides, unlike the other two, cannot adopt unquestioningly the traditional code of morals, and claims of national faith. His attitude is critical: he is an inquirer more than a believer. The government of the world; the actions of the gods; the myths and legends of Hellenic religion; the common-places of morality -all are freely examined and freely judged. He is not irreligious and he is not immoral; but he is (if we choose to apply modern terms) a rationalist and a sceptic. His is the questioning spirit
 everything impartially, regarding nothing too sacred, or too timehonoured for its scrutiny. In short, he represents the tone of Athenian society that grew up in the period of the Peloponnesian war. We are rightly warned not to speak of it as a time of moral deterioration; but it no doubt marked a great crisis'; as
must always be the case when independent thought begins to protest against what has hitherto been universally accepted, especially when such protest takes the form of free criticism of those forms of government which have till then been taken for granted.

It is against this growing tone that Aristophanes, as an uncompromising conservative, fights with desperate energy. It seemed to him at once impious and immoral; and, above all, it represented a deep disloyalty to that glorious Athenian past, in the foreground of which he seemed to see the 'men who had fought at Marathon' as the only true type of national hero. This free discussion, this unscrupulous independence of view, this setting up of individual judgment against immemorial tradition, was summed up under the general name $\sigma \circ \phi \iota \sigma \tau \kappa \dot{\eta}$, and the teachers who professed and disseminated such opinions were called $\sigma o \phi$ ototai, the very word gaining a tone of reproach by its application to them.

These professors, or Sophists, were not for the most part Athenian citizens. The most famous among them were Protagoras of Abdera, Prodicus of Ceos, Hippias of Elis, and Gorgias of Leontini. But they lectured to Athenian audiences, and their pupils were the wealthy Athenian youths. It was their business to meet the wants of the age; to introduce something like a systematic education; to furnish their pupils with a practical philosophy that should fit them for the various duties of life. And this seemed to be best attained by teaching them the art of speaking and arguing, and (as a necessary preparation) of thinking. But the celebrated dictum of Protagoras that 'man is the measure of all things' serves to show (however we may interpret it) that they did not profess to believe in an absolute standard of morality, or in any positive truth. Their aim was utilitarian. And so their antagonists had some ground for saying that their lessons in rhetoric and dialectic were intended to exhibit what was plausible rather than what was true; and they regarded with a not unreasonable suspicion the high fees charged for imparting wisdom-a practice which seemed to them not only sordid but positively sacrilegious.

The whole intention of this play of the 'Clonds' is to make
a vehement protest against the modern education introduced by these professors. Its radical fault consists in taking Socrates as their representative. Some such central figure is, of course, required, and there must always be an amount of unfairness, when the crimes or mistakes of a whole class are visited on the person of one man.

It is this necessity-as well as personal spite-which has overdrawn the caricature of Cleon in the 'Knights;' and which has done palpable injustice to Lamachus in the 'Acharnians,' as the type of the war-party. And in the 'Clouds' the relation of Socrates to the Sophists is wilfully or ignorantly misunderstood; so that the picture of him as their 'fugleman' is, consequently, notoriously unfair.

It must have been a great temptation to the Comic poet, and his mask-maker, to bring upon the stage that well-known, grotesque figure-that face with prominent eyes and flattened nose, that everyone was familiar with in the streets and in the market-place. No one could mistake him. But the temptation to present so familiar a character upon the stage, or even the conscientious desire to oppose the teaching of the Sophists, does not make the representation any more truthful. Nothing could be more unfair than to describe Socrates as taking exorbitant fees from his pupils, as being the type of the pale and squalid student, instead of the picture of rude health, or as being devoted to astronomy, and natural philosophy-studies which he had distinctly abjured long ago. Nor is it a truthful picture which represents Socrates shut up in a close and stuffy school, instead of enjoying that vagabond life which sent him to roam about the streets, and to haunt the shops and other places of public resort. Had Aristophanes really grasped the spirit of the Socratic teaching, he would have seen that it was rather a life-long protest against the shallowness of the Sophists. No one was further than he from accepting the evidence of the senses as the criterion of truth and falsehood; or the tendency of human desires as the criterion of what is truly desirable. Instead of this, he was profoundly convinced of the existence of an absolute good, the sole source of all happiness.

But a superficial observer might, perhaps, be excused for not
appreciating these radical differences. He would only see that Socrates did not raise his voice in protesting loudly against the spirit of the age in which he lived, nor cried in vain for the restoration of a past, which could never again be reproduced. For Socrates had set himself the difficult task of attempting to reform the faults of this modern spirit from within, instead of merely decrying it... And such a task was particularly open to misrepresentation, and was not likely to attract to itself the sympathy of ordinary men. There were, too, not a few points of actual resemblance between the Socratic method and that of the Sophists. They both employed the instrument of Dialectic, subjecting to the test of cross-examination the current views and common beliefs of the time-and, thus, they had alike a negative or destructive side to their philosophy. If the Sophists delighted to criticise, to question, to suggest doubts, and to raise objections; so Socrates had an unwelcome mission to perform, namely, to expose shams, to test severely, to weigh in the balances and find many things wanting, to disenchant, to disabuse. But his teaching had a constructive side as well; to rear what was true on the ruins of what was false; to make men think for themselves; to elicit the thought in their minds, and to force them to put it into shape.

Aristophanes was not alone in reckoning Socrates among the Sophists. Long after his sentence and death, when his character had been better studied and appreciated, Aeschines calls him 'Socrates the Sophist;' and, in still later times, Cato speaks of him as the corrupter of youth. Therefore we can hardly be surprised-we ought not even to be indignant-at a judgment passed upon him by his contemporaries in all the excitement of a party-struggle. When we remember, in the case of Cleon, the intense bitterness of which Aristophanes was master, we shall hardly be inclined to think his attack upon Socrates as personally malevolent. He conscientiously regarded him as the head and front of that modern spirit which was developing in Athens; and which threatened, as he thought, to sweep away all the old landmarks and hallowed memories of the past. His fault lay in his effort to stop the course of a torrent which could only gather strength by being held back; but which might, in the view of the
more far-sighted Socrates, be directed into proper channels, and be adapted to the service of the generations to come.

Aristophanes may then be considered as conscientious, though mistaken, in his attack upon Socrates. Indeed, had he been asked to distinguish between the itinerant teacher and the professors, he would have said that the former was the more dangerous. For the fees which the professors charged had the effect of limiting the number of their pupils; but the gratuitous teaching of Socrates was accessible to every stratum of Athenian society.

How formidable Socrates felt this attack to be, let him tell in

The play of the 'Clouds' was acted in the year 423 b.C, at the Great Dionysia. But the author only gained the third prize, Cratinus winning the first with his Mutivn, and Ameipsias the second with his Kóvyos. This failure disappointed Aristophanes, who thought it the very best play he had written : so he determined to make such alterations as were required, and to put it on the stage again. It is this altered form, or Second Edition, which we now possess; as we might indeed have inferred from the Parabasis ( 524 foll.), even had there been no external evidence to the same effect.

The exact relation between the two editions is best given in words from one of the Greek 'Arguments' prefixed to the play, probably the work of an Alexandrian grammarian: тоûтo тaùtóv

 Eakpátous.
'This edition is identical with the former one. But it has been to some extent recast, as though the poet had intended to reproduce it on the stage, but for some reason or other had never done so. A general revision too of nearly every part has been effected; some portions having been withdrawn; while others have been woven into the play, and alterations made in arrangement and interchange of characters.
'The main changes in the play, as recast, are the altered parabasis, the scene between the Just and Unjust Argument, and the burning of the house of Socrates.'
Here we must carefully distinguish bettween the $\delta<0$ op 0 wors of details, and the $\delta$ tarkeu' of the general plot.
What, we may ask, was the actual intention of these changes? Had the enmity to Socrates and his teaching deepened? Had Aristophanes learned, in the interim between the acting of the first edition and the preparation of the second for the stage, to regard Socrates as a dangerous citizen rather than as a silly pedant? It seems that these questions may be answered in the affirmative.

In the passage quoted above from the Apologia (ig c.) the word éwpât limits the reference made by Socrates to the acted, or earlier, edition of the play. There he was represented only as engaged in idle speculations; but that a far more serious view was afterwards taken of his teaching we can gather from the nature of the charge made against him by Anytus and Meletus,

 we take these words in connection with the views enunciated by the Unjust Argument, we shall see that Socrates distinctly appears as the champion of the new and pestilent form of education,
to the utter ruin, as the Just Argument says, of that ill-fated city
 wonder that the later edition ended with the firing of Socrates' house.

One of the Greek 'Arguments' to the 'Clouds' asserts that the play was produced in 422 b.c. in the Archonship of Ameinias, and that it failed more signally than before. But this was the year in which Aristophanes brought out his 'Wasps' and 'Proagon;' and the Parabasis of the 'Clouds' makes mention of the 'Maricas' of Eupolis, which was not represented till 42 I в.с.; so that the second edition of the 'Clouds' must, under any circumstances, have been subsequent to that date. The most probable view is that this second edition was not only never reproduced, but that the recast and revision were never quite completed. This is the only theory to account for such phenomena as the lacuna at 1.888 (see notes on text); the incongruity of $11.1105-1112$ with the foregoing scene, which was to decide whether Pheidippides should take his instruction from the Just or the Unjust Argument; the want of harmony between the strophe 700-706, and the antistrophe 804-813; the contradiction between 11. 550 and 58 I ; the former of which speaks of Cleon as dead, the latter as living. All these marks of incompleteness would, we may suppose, have been obliterated, had the final revision ever been made. It is not unlikely that after the death of Aristophanes his sons published the imperfect recast of the ' Clouds,' without any further alterations; and that its evident superiority to the former edition soon caused that version to fall into disuse. A few lines are quoted in Athenaeus, Diogenes Laertius, and Photius as having occurred év rais apotépats Neфèaus, which are not found in the extant form of the play. But, more than that, they seem to point to scenes so totally different from anything in the later edition, that we cannot help thinking that the daareví must have been very sweeping in its changes.

We might well ask at what point in our play we could insert this couplet, preserved by Diog. Laert. 2. 5, 18 :

or what offence offered to the Cloud-goddesses made them go off in a huff-(Phot. 398. II) :

Indeed, the whole tendency of such evidence as we possess corroborates the general view expressed in the Greek Argument quoted above. But it forces us to give a very wide in-

THB opening scene presents the interior of a room, shown by means of the $\dot{\epsilon} \kappa \kappa \cup \dot{\kappa} \lambda \eta \mu a$; containing two beds. Strepsiades is tossing, wideawake, upon one, and his son Pheidippides is sleeping under a pile of blankets on the other. Several slaves are snoring on mats upon the floor.

But, since the Peloponnesian war, masters cannot venture 'so much as to chastise their slaves' (v. 7), much less put them to the torture, for fear they should desert to the enemy. The opening scene of the 'Knights' introduces slaves preparing for desertion; cp. Thuc.

The prefix $\beta$ erke- recalls the experiment of Psammetichus II (Hdt. 2. 2), who shut two babies up with a she-goat, and waited to hear their first utterances, expecting thereby to learn what was the primitive language. Their first cry was $\beta \in \kappa$ (imitating the bleat of their foster-mother), and the king having learned that $\beta \in \kappa$ ós was the Phrygian word for bread, felt that he had established a science of Comparative Philology. The whole word may be rendered 'antediluvian.'

limestone rocks of Lebadeia in Boeotia, and was celebrated as early as the time of Croesus (Hdt. 1. 46) as one of the most famous Oracles. Pausanias, who had himself visited the cave, describes ( $9.39,2-14$ ) how the enquirer, after a course of lustral washings and sacrifices, and after drinking of the spring of Oblivion to make him forget his former thoughts, and of the spring of Remembrance to impress upon him the coming revelation, descended a ladder, carrying a cake to appease the serpents and other noisome beasts that haunted the cave. Reaching the bottom of the shaft he had to creep on hands and knees through a narrow opening to the actual place of the Oracle. There a sort of stupor came over him, during which he received such visions as were vouchsafed him; at last he woke up from his trance with a splitting headache, and in such terror that it was months before he could smile again. No wonder Strepsiades did not like the look of the entrance into the фpovtiotiptov, if it reminded him of this awful place!

1. 510. The Chorus wishes Strepsiades good luck as his retreating form disappears down the passage to the Contemplatory. Then, while the stage is clear of all the actors, the Chorus files forward, and the leader makes an address to the spectators in the name of the author of the play. This regular address, which, because it dealt with subjects unconnected with the plot, was called the 'Digression' ( $\pi a \rho a \dot{\beta} \beta a \sigma t s$ ), is peculiar to the old comedy, but not indispensable, as it is wanting in the Eccles., Lysistr., and Plutus. It must be remembered that we are here reading the second edition of the 'Clouds' (see Introduction); so that the failure of which the poet speaks refers to its earlier and unsuccessful exhibition. 'I hope,' he says, 'you will receive more graciously my recast of the play: it is the best I ever wrote. And I think I can reckon on your good taste, for you took very kindly to my first youthful essay: My comedy, while full of clever novelties, introduces no obscene exhibitions on the stage, no coarse jokes, no rude horse-play, no claptrap, no cruel personalities. Therefore I hope you will show your good sense by signifying your warm approval' (vv. 518-562).

are, you for whom I took all that trouble. But, notwithstanding, I never will, if I can help it, desert the cause of the shrewd critics among you.' He is taking credit to himself for having been generous enough to exhibit the first, and unsuccessful, edition of the 'Clouds' to the Athenian people at the great Dionysia in, the city ( $\pi$ pórovs .. ípâs), instead of representing it, as he might have done, at the theatre in the Peiraens, or at the country Dionysia. And as he had done this with full confidence in the appreciativeness of his audience, and the intrinsic value of his play, it was doubly hard to have been beaten, as he was ; Kratinus winning the first prize with his חvotv , 'the flask,' and Ameipsias the second with his $\mathrm{K} i$ voos. But he attributes this defeat to the ignorance of the крırai, and not to the clever audience before whom he played; and therefore he loyally comes before them again.

So to-day (vôv), like Electra in the play (ixeivqv), this comedy of mine has come seeking, if she may chance to meet with spectators no less clever. For if she do but catch sight of it she will recognise her brather's curl.' The intention of all this badinage is to remind the audience of their kind reception accorded to the play of the aııa入єîs, which he takes as an earnest of their present approval. He had been too young in в.c. 427 to enjoy the rights of full citizenship, and so he could not ask permission to bring his own play on the stage (xopiv airtî). So the actor and poet Philonides (rais istepa) had to take up the poor unacknowledged thing and present it as his own, and the audience took to it at once with most fatherly affection. What they had done for the 'Banqueters' Aristophanes is convinced they will do for his new comedy, which will instinctively recognise the former appreciative spectators, just as Electra (in Aesch. Choeph. 164 foll.) recognises the lock of Orestes' hair hung upon Agamemnon's tomb.

This Parabasis, which belongs to the 2nd edition only, must of course have been later than b.c. 42 I , as it alludes to the Maricas of Eupolis, which was brought out in that year. But Aristophanes did not altogether spare the memory of Cleon, as we see from the 'Wasps' and the 'Peace,' and indeed from inf. $5^{81}$, unless that passage remains unaltered from the 1st edition.

Eupolis had borrowed the general scheme of the 'Knights' from Aristophanes; and in order to ridicule the mother of Hyperbolus, had plagiarised on Phrynicus' burlesque of the 'Andromeda' or 'Cassiopeia.' We may suppose that the place of the princess, bound to the rock, was supplied by this drunken hag, who, probably, ends by dancing a vulgar 'break-down,' to express her joy at being rescued from the monster.

1. 615 . This amusing picture of the sufferings of the gods through the inaccuracies of the Athenian calendar may have been happily timed, because the astronomer Meton had been endeavouring, only a few years before, to improve the current system of reckoning, and Aristophanes may have wished to make a passing hit at the 'new-fangled' change. The difficulty, which was a very old one, lay in the attempt to make the solar year (regulated by the sun's apparent crossing of the tropics) harmonize with the lunar year, which settled all the religious festivals in Athens. The solar year consists roughly of $365 \frac{1}{4}$ days; the lunar month of $29 \frac{1}{2}$ days, so that 12 lunar months $=354$ days. The common system in vogue at Athens, since Solon's time, for harmonizing these
two methods of reckoning, was by arranging a cycle of 8 years ( $\boldsymbol{b}_{\kappa \tau \alpha}$ ernpis), five of which consisted of the ordinary number of 354 days, while the other three were each raised to the number of 384 , by the insertion of a month of 30 days. Now $354 \times 5=1770$, and $384 \times 3=$ 1152, which gives a sum of 2922, identical in amount with 8
 erppís consisted of 30 days instead. of $29 \frac{1}{2}$ (the true lunar month), there was an error in excess at the end of the cycle of II $\frac{1}{2}$ day -a very appreciable quantity. The gods might well grumble, as this would be sufficient to disarrange the whole calendar. We might illustrate it by supposing Shrove Tuesday pushed forward to Ash Wednesday, or vice versa.

It must be remembered that Socrates (Xen. Mem. 2. 2), so far from countenancing such an idea, enjoined the duty of the tenderest filial love even to a harsh mother.

1. 1448. ri $\delta^{\prime} d \lambda \lambda_{0} \%$. The resumption of the question $\pi^{i} 8^{\prime}, 1445$, as in sup. 1287, inf. 1496; lit. 'what else could there be than that, if you do this, nothing will stand in the way of your harling yourself and the worse argument into the Gulf, along with Socrates?' The $\beta$ apaOpor was a chasm behind the Acropolis, into which criminals convicted on a capital charge were thrown.
1. 1455. orpétlas is intended as a pun upon the name ŻTpequd́ors.
1. 1457. inúpers, imperf. twaipo (not aor. \&whpare), 'kept egging on.' Here the Chorus suddenly takes a high moral line, and declare that they have visited Strepsiades with 'judicial blindness' for his arrogance and dishonesty.
1. 1464. ※ $\boldsymbol{\phi} \boldsymbol{\lambda}_{\text {tare, }}$ addressed to Pheidippides, 'see that you destroy C. and S., pursuing them with your vengeance.' Meredobv, as in Eur.

1. 1468. xaraifforntr, the verse is parodied from some tragedy.
1. $147 \mathrm{I} .=$ sup. 828.
2. 1473. Sud rourovi rdv $\Delta$ ivov, 'thanks to this Dinos here; ah ! miserable fool that I was, when I actually thought you, though made of pottery as you are, to be a god.' If the last line be genuine, we have no alternative but to take the interpretation of the Scholiast, who says that a סivos is an earthenware jar broader above than at bottom, so that it looked something like a top. sivos seems used for a wine-jar in Vesp. 618. Of course Strepsiades is playing on the name.
1. 1475. ivraî0a, ' [stop] here [and] keep your folly and your chatter for yourself.' Exit Pheidippides.
1. 1477. ${ }^{\xi} \leqslant \beta a \lambda \lambda o v$, imperf., 'sought to turn out.'
1. 1478. تрия. A bust of Hermes is standing in the street near the house of Strepsiades. He goes up to it and asks the god's advice whether he shall bring an action against Socrates and his friends (ypaqt) $\dot{d} \sigma \in \beta \in i a s)$, or anything else the god likes to suggest. He puts his ear to the mouth of the statue, and pretends to have heard its counsel (8p06s maparwîs).
1. 1495. I Th mow ; ' you ask what I am doing, why nothing more than chopping logic with the beams of your house.'
1. 1498. Ooluátiov. See sup. 497 and 856.
